

Pure Fermentation SIHA® Active Yeast 8 (Burgundy Yeast)

Saccharomyces Cerevisiae, Strain WF 748

SIHA Active Yeast 8 (Burgundy Yeast) from Eaton's Begerow Product Line is a dry, pure culture yeast especially formulated for fermenting red wine mashes and red wine musts. Its special advantages include, besides preservation of color, rapid fermentation start and reliable thorough fermentation even under unfavorable conditions. This yeast strain is therefore suitable for producing red wines with a stable color from the wine types late Burgundy, black Riesling, Trollinger, Portuguese and other red wine sorts.

The specific advantages of SIHA Active Yeast 8 (Burgundy Yeast):

- Specially formulated for red wine mashes and musts
- Demonstrably less loss of color
- Selected over years for red wines with a typical character
- Very rapid fermentation start
- Little formation of unwanted fermentation side products
- Easy suspension by stirring in – simple application

Application

The musts or mashes in each single fermentation drum should be treated with SIHA Active Yeast 8 (Burgundy Yeast) in good time. Longer periods of standing favor the uncontrolled reproduction of wild yeasts and unwanted bacteria.

Application	Quantity required lb/1,000 gal (g/hl) under	
	normal	difficult
	fermentation conditions	
Red wine mashes	1.3 – 2.0 (15 – 25)	1.7 – 2.5 (20 – 30)
Red wine musts	1.3 – 1.7 (15 – 20)	1.7 – 2.0 (20 – 25)

These quantities are guidelines and should be adjusted to suit the individual conditions (health of the harvested grapes, temperature, container size etc.).

The optimum fermentation temperature is 72 – 79 °F (22 – 26 °C). A starting and fermentation temperature of at least 54 °F (12 °C) is necessary.

Heated musts/mashes may only be treated with SIHA Active Yeast 8 (Burgundy Yeast) when they have been re-cooled or have cooled down to 68 °F (20 °C).

The yeast is best stirred into 10 times the amount of a fifty-fifty must-water mixture at 86 – 95 °F (30 – 35 °C), left about 10 minutes, then stirred thoroughly again and added to the must. It can also be added directly to the must without suspension. The period until fermentation begins is only extended by a few hours as a result. However, to ensure reliable fermentation, the yeast quantity should be increased by about 20%.

In the case of red wine mashes, the yeast should always be suspended and added during the mash in portions.

The addition of 0.005 lb SIHA Vitamin B₁ yeast nutrient fermentation aid per 1,000 gal (600 mg per 1,000 l) creates even better reproduction, fermentation and metabolic conditions. To complete the fermentation of stopped wines, the addition of 0.8 lb/1,000 gal (10 g/hl) SIHA Fermentation Salt yeast nutrient fermentation aid (diammonium phosphate) is recommended.

Product Characteristics

SIHA Active Yeast 8 (Burgundy Yeast) produces typical red wines with a particularly stable color. Through many years of selection, we have succeeded in greatly reducing the color adsorption of the yeast during fermentation. This very positive characteristic of the yeast is enhanced and ensured through an on-going selection effort. Further selection objectives were high fermentation activity, vitality and a high degree of final fermentation. Wild yeasts and unwanted bacteria are suppressed.

SIHA Active Yeast 8 (Burgundy Yeast) produces no unwanted fermentation side products such as SO₂, H₂O, acetaldehyde, pyruvic acid (pyruvate), α-ketoglutaric acid, volatile, and esters.

SIHA Active Yeast 8 (Burgundy Yeast) can produce up to 16% alcohol by volume. The practical alcohol yield is approximately 47% of the sugar content. For each lb (kg) of sugar fermented, approx. 247 kJ (546 kJ)/59 kcal (130 kcal) of heat is released.

Safety

No technical safety data are required as this product goes directly into production of foodstuffs.

There is no danger for personnel and the environment during storage, handling and transportation.

Storage

SIHA Active Yeast 8 (Burgundy Yeast) is packed in gastight aluminum sandwich foil using inert gas. The package is vacuum-sealed and can be easily checked for intactness. The packing date is embossed in the package seam.

The yeast can be stored in an undamaged package at 39 – 50 °F (4 – 10 °C) for four years, for a short time at temperatures of up to 68 °F (20 °C).

Delivery Information

SIHA Active Yeast 8 (Burgundy Yeast) is sold under article number 93.080 and is available in the following package sizes:

0.28 lb (125 g) aluminum sandwich foil package
25 x 0.28 lb (125 g) package in cardboard box

1.1 lb (500 g) aluminum sandwich foil,
block package

20 x 1.1 lb (500 g) block packages in cardboard box

HS Customs Tariff: 2102 10 90

Certified Quality

SIHA Active Yeast 8 (Burgundy Yeast) is monitored constantly during the production process to ensure consistently high quality. These inspections cover technical function criteria as well as approval in accordance with the law governing the production and sale of foodstuffs. Strict controls are carried out immediately before and during final packing.

SIHA Active Yeast 8 (Burgundy Yeast) complies with the purity criteria of the International Codex for wine treatment products and with the specifications of the German Wine Code.
